HELL

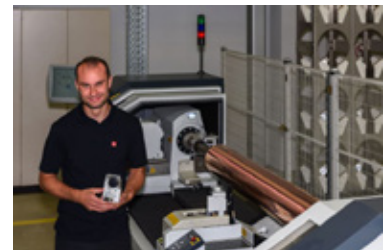

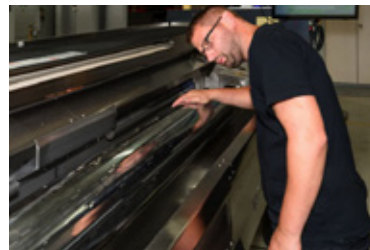

4PACKAGING BECOMES FIRST COMPANY TO BE HD-CERTIFIED.

HELL rewards outstanding results in cylinder engraving.

After implementing Certified Engraving, 4Packaging has become the world's first company to be HD-certified by HELL. This certification recognizes the outstanding results 4Packaging continuously achieves in the four categories of edge sharpness, detail reproduction, reproducibility and quality assurance.

Moving forward, cylinder engravers that achieve outstanding results in printing form production will be HD-certified by HELL Gravure Systems. This certification is based on the four categories – edge sharpness, detail reproductions, reproducibility and quality assurance. A total of seven Helioklischograph K500 systems and three Cellaxy laser engravers are used at 4Packaging. All of these are equipped with the latest HD software features. By awarding the HD certification to 4Packaging, HELL is rewarding the company's expert handling of HD technology and stringent quality standards.

Only recently, 4Packaging implemented Certified Engraving to expand its internal quality assurance, making it the first company to meet all the requirements to obtain the HD certificate.

FLEX-PUNKT CONTINUES ON THE ROAD TO SUCCESS.

New laser centre with five direct lasers and two LAMS lasers from HELL occupied.

Flex-Punkt has been working continuously for many years to optimise its products and service offerings in terms of sustainability, resource efficiency, delivery capability and quality. In doing so, the prepress company based in Melle in the district of Osnabrück focuses specifically on innovations and invests above average in new technologies and digital infrastructure.

Flex-Punkt produces around 11,500 flexo sleeves annually, 8,500 of which are for flexible packaging printing and 3,000 for the tissue and decor sector. Flex-Punkt's steady and sustainable growth is also reflected in the number of employees, which has now grown to over 50. In August 2020, the company decided to build an

Flex-Punkt currently manufactures with five direct lasers as well as two LAMS lasers from HELL

successful development of Flex-Punkt. The two companies have been working together for 20 years in a very fruitful and trusting relationship. As early as 2001, Flex-Punkt carried out the beta test for the first laser engraving system from HELL. Currently, elastomer and photopolymer sleeves and plates are produced with five direct lasers and two LAMS lasers from Hell.
