K.WALTER:

Made to measure

New MicroMet with optimized functions

K. WALTER

MADE TO MEASURE

New MicroMet with optimized functions

Intuitive operator guidance, high measuring accuracy and reliability with extremely short measuring times are also a matter of course in this new generation of measuring instruments. Our customers all over the world can also choose from a wide range of languages in the device menu.

Precise coating thickness measurement now also on chromium(III)

The new MicroMet meets the new challenges posed by the gradual replacement of chromium(VI) by the more environmentally friendly and non-toxic chromium(III). It is specifically designed for high-precision measurement of chrome layers on the underlying copper. For the first time, both deposited chromium(VI) and chromium(III) layer thicknesses can be measured, making the new MicroMet generation HelioChrome® NEO ready – i.e. already suitable for the forward-looking HelioChrome® NEO technology.
